

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1 - 25. (Canceled)

1 26. (Previously Presented) A liquid crystal display device comprising:
2 a pair of substrates;
3 a liquid crystal layer interposed between said pair of substrates;
4 drain lines and gate lines formed on one of said pair of substrates and crossing
5 each other in a matrix form, each crossing of said drain lines and gate lines defining a pixel;
6 a switching element associated with and disposed relative to each pixel;
7 a sheet-like counter electrode comprising a transparent conductive film arranged
8 at each pixel;
9 a counter voltage line formed on said counter electrode, said counter voltage line
10 including a multi-layered structure comprising a first molybdenum layer, an aluminum layer, and
11 a second molybdenum layer in this order;
12 a first insulating layer formed on said counter electrode and said counter voltage
13 line;
14 a second insulating layer formed on said first insulating layer; and
15 a pixel electrode comprising a transparent conductive film which is electrically
16 connected to said switching element.

1 27. (Previously Presented) The liquid crystal display device according to
2 claim 26, wherein said aluminum layer includes an alloy layer comprising essentially of
3 aluminum.

1 28. (Previously Presented) The liquid crystal display device according to
2 claim 26, wherein at least one of said first molybdenum layer and said second molybdenum layer
3 includes an alloy layer comprising essentially of molybdenum.

1 29. (Previously Presented) The liquid crystal display device according to
2 claim 26, wherein said pixel electrode has an approximately linear-shaped structure,
3 zigzag-shaped structure, slit shape structure, or comb-shaped structure.

1 30. (Previously Presented) The liquid crystal display device according to
2 claim 29, wherein said pixel electrode extends in the same direction as said gate electrode.

1 31. (Previously Presented) The liquid crystal display device according to
2 claim 26, wherein said transparent conductive film of said pixel electrode and of said counter
3 electrode each includes one of ITO, IZO and IGO.

1 32. (Previously Presented) The liquid crystal display device according to
2 claim 31, wherein said transparent conductive film is a polycrystalline.

1 33. (Previously Presented) The liquid crystal display device according to
2 claim 31, wherein said transparent conductive film is amorphous.

1 34. (Previously Presented) The liquid crystal display device according to
2 claim 31, wherein said transparent conductive film of said counter electrode and of said counter
3 electrode are of different materials.

1 35. (Previously Presented) The liquid crystal display device according to
2 claim 34, wherein said transparent conductive film is a polycrystalline.

1 36. (Previously Presented) The liquid crystal display device according to
2 claim 34, wherein said transparent conductive film is amorphous.

1 37. (Previously Presented) The liquid crystal display device according to
2 claim 26, wherein said switching element is a thin film transistor and said first insulating layer is
3 a gate insulating layer of said thin film transistor.

1 38. (Previously Presented) A liquid crystal display device comprising:
2 a pair of substrates;
3 a liquid crystal layer interposed between said pair of substrates;
4 a sheet-like first electrode comprising a transparent conductive film arranged on
5 one of said pair of substrates;
6 a multi-layered structure line comprising a first molybdenum layer and an
7 aluminum layer and a second molybdenum layer in this order formed on said first electrode;
8 a first insulating layer formed on said first electrode and said multilayered
9 structure line;
10 second insulating layer formed on said first insulating layer; and
11 second electrode comprising a transparent conductive film formed on said second
12 insulating layer.

1 39. (Previously Presented) The liquid crystal display device according to
2 claim 38, wherein said aluminum layer includes an alloy layer comprising essentially of
3 aluminum.

1 40. (Previously Presented) The liquid crystal display device according to
2 claim 38, wherein at least one of said first molybdenum layer and said second molybdenum layer
3 of multi-layered structure line includes an alloy layer comprising essentially of molybdenum.

1 41. (Previously Presented) The liquid crystal display device according to
2 claim 38, wherein said second electrode has an approximately linear-shaped structure,
3 zigzag-shaped structure, slit shape structure, or comb-shaped structure.

1 42. (Previously Presented) The liquid crystal display device according to

2 claim 41, wherein said second electrode extends in the same direction as said gate electrode.

1 43. (Currently Amended) The liquid crystal display device according to claim
2 38, further comprising drain lines and gate lines formed on one of said pair of substrates [anal]
3 and crossing each other in a matrix form, pixels being formed corresponding to domains
4 surrounded by crossings of said drain lines and said gate lines, wherein said first electrode and
5 said second electrode are arranged for each pixel.

1 44. (Previously Presented) The liquid crystal display device according to
2 claim 43, wherein said transparent conductive film is a polycrystalline.

1 45. (Previously Presented) The liquid crystal display device according to
2 claim 43, wherein said transparent conductive film is amorphous.

1 46. (Previously Presented) The liquid crystal display device according to
2 claim 43, further comprising a switching element arranged for each pixel, wherein said switching
3 element is connected said second electrode.

1 47. (Previously Presented) The liquid crystal display device according to
2 claim 46, wherein said switching element is a thin film transistor and said first insulating layer is
3 a gate insulating layer of said thin film transistor.

1 48. (Previously Presented) The liquid crystal display device according to
2 claim 43, wherein said multi-layered structure line is arranged over two or more pixels.

1 49. (Previously Presented) The liquid crystal display device according to
2 claim 48, wherein said multi-layered structure line extends in the same direction as said gate
3 electrode.

1 50. (Previously Presented) The liquid crystal display device according to
2 claim 38, wherein said transparent conductive film of said first electrode and of said second
3 electrode each includes one of ITO, IZO and IGO.

1 51. (Previously Presented) The liquid crystal display device according to
2 claim 50, wherein transparent conductive film of said first electrode and said second electrode
3 are different materials.

1 52. (Previously Presented) The liquid crystal display device according to
2 claim 51, wherein said transparent conductive film is a polycrystalline.

1 53. (Previously Presented) The liquid crystal display device according to
2 claim 51, wherein said transparent conductive film is amorphous.

1 54. (Previously Presented) The liquid crystal display device according to
2 claim 50, wherein said transparent conductive film is a polycrystalline.

1 55. (Previously Presented) The liquid crystal display device according to
2 claim 50, wherein said transparent conductive film is amorphous.

1 56. (New) The liquid crystal display device according to claim 27, wherein at
2 least one of said first molybdenum layer and said second molybdenum layer includes an alloy
3 layer comprising essentially of molybdenum.

1 57. (New) The liquid crystal display device according to claim 27, wherein
2 said transparent conductive film of said counter electrode includes one of ITO, IZO and IGO.

1 58. (New) The liquid crystal display device according to claim 57,
2 wherein said transparent conductive film is polycrystalline.

1 59. (New) The liquid crystal display device according to claim 57,
2 wherein said transparent conductive film is amorphous.

1 60. (New) The liquid crystal display device according to claim 27,
2 wherein said counter voltage line extends in the same direction as said gate lines.

1 61. (New) The liquid crystal display device according to claim 58,
2 wherein said counter voltage line extends in the same direction as said gate lines.

1 62. (New) The liquid crystal display device according to claim 39,
2 wherein at least one of said first molybdenum layer and said second molybdenum layer
3 includes an alloy layer comprising essentially of molybdenum.

1 63. (New) The liquid crystal display device according to claim 62,
2 further comprising drain lines and gate lines formed on one of said pair of substrates and
3 crossing each other in a matrix form, pixels being formed corresponding to domains
4 surrounded by crossings of said drain lines and said gate lines, wherein said first
5 electrode and said second electrode are arranged for each pixel.

1 64. (New) The liquid crystal display device according to claim 63,
2 wherein said multi-layered structure line is arranged over two or more pixels.

1 65. (New) The liquid crystal display device according to claim 64, wherein
2 said multi-layered structure line extends in the same direction as said gate lines.

1 66. (New) The liquid crystal display device according to claim 65,
2 wherein said second electrode has an approximately linear-shaped structure, zigzag-shaped
3 structure, slit shape structure, or comb-shaped structure.

1 67. (New) The liquid crystal display device according to claim 63, wherein
2 said second electrode extends in the same direction as said gate electrode.

1 68. (New) The liquid crystal display device according to claim 62, wherein
2 said transparent conductive film of said first electrode and of said second electrode each
3 includes one of ITO, IZO and IGO.

1 69. (New) The liquid crystal display device according to claim 68, wherein

2 said transparent conductive film is a polycrystalline.

1 70. (New) The liquid crystal display device according to claim 68, wherein
2 said transparent conductive film is amorphous.

1 71. (New) The liquid crystal display device according to claim 39, wherein
2 said transparent conductive film of said counter electrode includes one of ITO, IZO and IGO.

1 72. (New) The liquid crystal display device according to claim 71, wherein
2 said transparent conductive film is polycrystalline.

1 73. (New) The liquid crystal display device according to claim 71, wherein
2 said transparent conductive film is amorphous.

1 74. (New) The liquid crystal display device according to claim 72, wherein
2 said multi-layered structure line extends in the same direction as said gate lines.

1 75. (New) The liquid crystal display device according to claim 39, wherein
2 said multi-layered structure line extends in the same direction as said gate lines.
